

Bonus Task - Uptime Monitor Workflow

Objective: The uptime monitoring workflow checks the TodoMVC website every 5 minutes. Website Monitored: <https://todomvc.com/examples/react/dist/> Workflow Logic:

1. Schedule Trigger runs every 5 minutes
2. HTTP Request node checks website response.
3. IF node verifies HTTP status code.
4. If status code is not 200, an alert is sent using Discord webhook. Features: - Automatic uptime monitoring

- HTTP status validation - Alert notifications - Basic error handling Tools Used: - n8n - HTTP Request Node - IF Node - Discord Webhook Conclusion: This workflow helps detect website downtime automatically and improves monitoring reliability.
